Synthetic Resin

Materials and Finishes Maintenance

Synthetic Resin

The synthetic rattan that we use is a fiber made of HDPE High Density Polyethylene with the following features:

- UV and weather resistant
- Environmental friendly
- Washable and durable
- 100% recyclable
- Non-fading
- Easy maintenance
- High tensile strength
- Non-toxic

Standard maintenance:

To clean, use a soft cloth / brush with water and, if necessary, a neutral detergent.

Do not use solvents or alkaline detergents which could damage the strings. Avoid chemical detergents, aggressive solvents, rigid brushes and high pressure water, this in order not to deteriorate the surface of the rope itself.

Never scrape the surface.

Remove the dirt on the surface by washing with water, use non-aggressive detergent products with the help of sponges and / or soft rags.

Rinse thoroughly until all detergent or soap residues are completely eliminated. If the dirt persists, repeat the operation.

Cleaning tips:

- Spray Cleaner (Chanteclair or similar) on the surface and let cleaning solution sit 1 minute.
- Brush the surface repeatedly in a circular motion using a soft bristle brush.
- Flush with plenty of water, as it is very important to avoid residue drying on surface. Wipe with a dry cloth.

Rattan - Wicker - Rawhide

Materials and Finishes Maintenance

Rattan - Wicker - Rawhide

Rattan

Wicker

Rawhide

Rattan and wicker: Vegetal fibers.

Rattan is obtained from the thin and flexible stem of some climbing palms widespread in tropical and sub-tropical areas.

The wicker is obtained from the innermost part of the rattan.

Rawhide: It is obtained from untanned animal skin and is composed of collagen.

Standard maintenance:

For cleaning, we recommend dusting with a soft brush and, if necessary, a cloth dampened with water. Alcohol or solvents of any kind are not recommended as they can damage the surface.

To preserve the durability of these natural materials avoid exposure to direct sun and rain.

Keep your indoor natural wicker furniture cleaned regularly. Use a vacuum cleaner with a brush attachment to regularly clean the dust out from between the weave. Dirt that builds up in the weave can become very difficult to remove if left go for long periods of time. So, if your home tends to have high dust or dirt in the air or on your clothes, you should be sweeping your furniture at least every few months. Doing so will ensure that the finish stays clear of dirt and grime.

When your natural wicker furniture becomes dirty and will not clean up with regular vacuuming, you need to get a little more serious about your cleaning method. It's time to break out the cleaning tools and products that clean the dirt off, but leave the natural wicker unmarred from the cleaning process.

To spot clean, you will need an old tooth brush and follow these steps:

- Use a small container about the size of a 12 oz. soup can. Add a few drops of dish soap into the container and dilute it by filling the container about half way with hot or warm tap water.
- Dampen the tooth brush with the diluted solutions and spot scrub your wicker.
- After cleaning the spot with the brush, wipe up the residual soap on the spot using an old wash cloth with cold water until the excess water is removed.
- Wiping and rinsing several times will nicely remove any soapy residue, but leave the natural wicker damp.
- Allow the damp wicker to thoroughly dry. This may take several hours depending on how much water is absorbed into the natural wicker fibers and the humidity in the air. Direct sunshine and high air flow will speed up the drying process.

Maintenance of painted iron furniture products

Our products made of iron undergo special processing and painting cycles to make them suitable for use in outdoor environments in order to counteract the natural process of corrosion.

The phenomenon of corrosion is the deterioration of a material caused by exposure to atmospheric agents, chemicals, etc.

The rate of corrosion depends, among other things:

- on the aggressiveness of the environment in which the product is placed
- on the maintenance of the product

- Aggressiveness of the environment

The classification in Italy is regulated by the UNI EN ISO 12944-2 standard, which correlated the type of outdoor environment to a corrosion class:

Corrosion class	Typical outdoor environments
C2 - Low	Areas with low level of pollution, mainly rural areas.
C3 - Medium	Urban and industrial areas, modest pollution by sulphur dioxide. Coastal areas with low salinity.
C4 - High	Industrial and coastal areas with moderate salinity.
C5M - Very high (marine)	Coastal and offshore areas with high salinity.
C5I - Very high (industrial)	Industrial areas with high humidity and aggressive atmosphere.

Materials and Finishes Maintenance

Steel - Plain paints / Embossed paints / Special paints

Cleaning tips

- Products

Before using a cleaning agent, make sure that it is suitable for cleaning painted surfaces (see technical data sheet).

If a strong cleaning agent is to be used to remove heavy soiling, it must always be diluted and tested on small areas that are not visible in order to check their suitability.

Under no circumstances may abrasive or polish cleaners or any detergents containing solvents or solutions containing chloride hydrocarbons, esters or ketones be used.

- Frequency

The frequency of cleaning depends on:

- The environment in which the surface is located, that is, rural, marine, industrial or a combination of these environments, etc.;
- The levels of air pollution;
- Whether placed indoors or outdoors;
- If the surface is subject to an erosive action of the coating, due to sand, dust, etc.;

Corrosion class	Typical outdoor environments	Checking and cleaning frequency
C2 - Low	Areas with low level of pollution, mainly rural areas.	12 months
C3 - Medium	Urban and industrial areas, modest pollution by sulphur dioxide. Coastal areas with low salinity.	6 months
C4 - High	Industrial and coastal areas with moderate salinity.	3 months
C5M - Very high (marine)	Coastal and offshore areas with high salinity.	2 months
C5I - Very high (industrial)	Industrial areas with high humidity and aggressive atmosphere.	2 months

- Maintenance / Restoration

In case of need for a restoration of the painted surface due to:

- Heavy soiling due to incorrect cleaning;
- Normal degradation over time;
- Accidentally damaged coating (the damaged area should be repaired as soon as possible to avoid oxidation/rusting triggers);

It is recommended to use companies/operators with appropriate skills.

REGULAR CLEANING

The fabrics used for gazebo covers are treated with a special finish which delays the forming and accumulation of dirt. In order not to spoil this treatment, cleaning of the fabric must be done regularly respecting the following recommendations:

Standard maintenance:

- Dust and dry awning as thoroughly as possible to remove all surface particles by vacuuming, air blasting, beating or brushing.

Stain removal:

- For fingerprints or grease stains, use soapy water.
- For watermarks, sponge out as much as you can and rub gently with a moist cloth. Never use detergents or other chemical products.
- Do not machine wash.
- Do not use pressure washer machine.

2047 Anthracite

REGULAR CLEANING

SOLTIS textiles has a surface treatment that contains an anti-grip to withstand the pollution.

To avoid sedimentation of polluting agents however, cleaning must be carried out regularly.

How to make regular cleaning.

- Ensure the SOLTIS textile is rolled out.
- Spray a detergent like chantecclair
- According to the severity of the dirt or stain, leave for 2 to 3 minutes.
- Rub with a soft brush or a white cloth.
- Rinse with clean water or wipe with a wet sponge.
- In case of deep staining, repeat the above procedure.

Chemical products are forbidden

- Leave the SOLTIS textile to dry, spread out in the open air if weather conditions allow.

Eco-leather and marine - Protective covers

DICKSON SURLAST

Light grey

Stain Resistant

Easy Maintenance

For a correct use, it is recommended to cover the furniture only if perfectly clean and dry and to insert the cover in the correct position on the article. If the cover is placed on damp or wet furniture, take care to remove it within a few hours and allow both the furniture and the cover to dry well.

Never store or fold wet or damp covers, but allow them to dry in a well-ventilated area.

One of the best ways to keep your protective cover made on Surlust looking good is to hose fabrics off on a monthly basis with clear water.

When it's time for a thorough cleaning, Surlast can be cleaned while still on site or, size permitting, they can be removed for cleaning in a washing machine.

General cleaning

- Brush the fabric to remove surface dirt.
- Spray the fabric with cold water.
- Prepare a mixture of soap and water. 1/4 cup mild soap, such as Woolite or Dawn dishwashing liquid, per gallon of lukewarm water.
- Rub the mixture onto the fabric with a soft brush.
- Allow the mixture to act on the fabric.
- Rinse thoroughly with clean water until the cleaning solution is completely removed.
- Allow the fabric to dry in the open air.

Spot stains cleaning

- Prepare a mixture of soap and water. 1/4 cup mild soap, such as Woolite or Dawn dishwashing liquid, per gallon of lukewarm water.
- Apply the mixture using a spray bottle.
- Work the solution into the stain by lightly scrubbing the area with a sponge or very soft bristle brush.
- Rinse thoroughly to remove all soap residue.
- Blot excess moisture with a clean, soft towel or sponge.
- Wet-vacuum or blot excess water.
- Air dry. Repeat steps 3 and 4 until all soap residue is removed.

To get rid of mould, use a solution of 1/10 bleach, 2/10 soap and 7/10 water instead of the mixture of soap and water.

For removable Surlast covers

Hand washing

- Soak fabric in a solution of 1/4 cup mild soap per gallon of lukewarm water.
- Use a sponge or a soft bristle brush as necessary.
- Rinse thoroughly to remove all soap residue.
- Air dry.

Machine washing

Machine wash in cold water. Depending on wash load size, use normal amounts of mild laundry detergent and add 1 cup of bleach. Allow fabric to air dry.

Tips

DO NOT dry clean. Surlast air-dries very quickly. Machine drying is not necessary. If fabric has some wrinkling, use an iron, if necessary, but only on the synthetic setting. As some irons exceed the recommended temperature on the synthetic setting, test a small inconspicuous area before ironing entire piece.

DO NOT use a steamer or iron set to steam setting.

High-performance materials for an unique rug that is both extremely durable and easy-to-maintain.

Despite its woven textile, the Zibal rug guarantees an **excellent resistance** to liquid, dust and dirt. The warp and weft yarns are joined to a non-slip base layer for a greater stability on the floor.

The technical threads that compose the rug are resistant to mildew and fungus.

Furthermore, the **completely waterproof textile** makes the Zibal rug suitable to be used in any kind of outdoor area, without having any problem with direct sunlight or rain.

The Zibal rug by Samuele Mazza outdoor collection is the perfect accessory to decorate even the most refined and precious outdoor space combining **fashion and high-performances**.

Daily maintenance:

- Brushless vacuum cleaner

Periodic maintenance:

- Dry cleaning or steam cleaning

Stains:

- Dab with a clean cloth; act with specific detergents following the manufacturer's instructions carefully.

Marble, Ceramic and Glass

Materials and Finishes Maintenance

Natural Marbles

Travertino

Oriental Portoro

Dark Emperador

Silver Dragon

Rainforest Green

Rainforest Brown

Our marbles are of natural stone and therefore have tones and veins that can vary, which make each piece unique and unimitable.

Each top is treated with silicon wax which is water repellent, that with time loses its effectiveness, for this reason we advise to repeat the process with wax for marble that you can easily find in a hardware store.

Regular maintenance

For normal cleaning it will be sufficient to pass the surface with water and a neutral detergent or alcohol, ensure not to use detergents that are too aggressive (very high or very low Ph), and in particular to remember to dry immediately the top with a clean cotton cloth.

Precautions

Avoid exposing the surface to chemical substances or solvents, in particular those for paints, that contain trichloroethylene or Methylene chloride, solvents for nails, ammonia or detergents that contain ammonia, brighteners, indelible pens or ink, oily soap, coffee, wine, oil or residues of food , like lemon or tomatoes.

If the tops were to come into contact with any of these substances wash immediately with plenty of water. Active and quick maintenance is fundamental for maintaining the integrity of the marble which is a live and natural product that has the tendency to absorb all substances with which it comes into contact with.

• Move the marble top always in vertical position.

• Approach the marble top to the structure on which it should be placed gradually tilting it.

Materials and Finishes Maintenance

Ceramics

CERAMIC MARBLES

Ceramic tops do not require any particular maintenance, thanks to the high resistance and stability of the material.

Regular maintenance

Cleaning can be carried out very simply using soft and clean cloths soaked in water, possibly adding neutral liquid detergent.

Dry the surface after cleaning is complete.

Do not use metal or abrasive brushes.

Precautions

The use of products containing waxes, brighteners, strong acids (eg hydrofluoric, sulfuric, etc.) is not recommended because they could permanently damage the surface.

Remove any spills of staining liquids (like coffee, tea, red wine), caustic substances (such as oven cleaner), acids and colorants as soon as possible and rinse with water.

Ceramic tops are particularly resistant to thermal shocks, however we recommend the use of trivets to protect the surface over time.

Ceramic knives can damage the surface; therefore, we recommend to use cutting boards.

Avoid hitting the surface.

- Move the ceramic top always in vertical position.

- Approach the ceramic top to the structure on which it should be placed gradually tilting it.

Regular cleaning:

- Use warm soapy water, rubbing vigorously with non-abrasive cloths and sponges.
- Rinse thoroughly with cold water and rub again with clean cloths until completely dry, to avoid streaks.
- Do not use bleach and all related products. Under no circumstances should bleach come into contact with stainless steel.
- Avoid all cleaning products that contain chlorine, nitric acid, sulfuric acid, products with abrasive particles.

More stubborn stains:

- Mix a glass of boiling water with white wine vinegar and 2 tablespoons of baking soda. Dip the sponge in this solution and wipe it over the steel surface.
- Rub vigorously.
- Rinse and dry immediately with a clean cloth.

To keep the steel parts clean and shiny, regular cleaning on a monthly basis is required.
